

peterson MIDI Equipment Package M

Edirol SD-80 Sound Module

MIDI Equipment Package M is a collection of components hand selected by Peterson engineers and music enthusiasts for use in a medium size church sanctuary. The Edirol SD-80 Studio Canvas sound module provides a wide variety of MIDI voices to accompany a pipe organ. The module can be left accessible or hidden out of site because sounds can be selected via piston or stop control, depending on your pipe organ's MIDI system configuration.

The JBL EON15 G2 powered speakers have a built-in amplifier delivering 300 watts of power to a 15" neodymium Differential Drive® LF driver. The driver boasts a dual neodymium magnet and dual voice coil motor that efficiently delivers high output from a lightweight woofer. Meanwhile, the HF amplifier delivers 100 watts of power to a 1.75" titanium diaphragm compression driver with Ferro-fluid cooling. This set has plenty of power for a good sized sanctuary and a built-in mixer to optimize the sound for your application.

This package also includes 3 Single Outlet AC Control Boxes so that each component can be turned on and off with the organ. Simply wire your organ rectifier to terminals on the control boxes, and then plug the MIDI equipment line cords into them.

Two 150 foot pre-terminated audio cables are provided to connect the sound module to the amplifiers/speakers, and a 10 foot MIDI cable is supplied to connect your MIDI Instrument Out port to the sound module.

Best of all, our MIDI Equipment Packages come with telephone support during installation and setup from the renowned Peterson customer service team!

Includes

- Edirol SD-80 Sound Module
- 2 - JBL EON15 G2 Powered Speakers
- 3 - Single Outlet AC Control Boxes
- 2 - 150 Foot Audio Cables
- 1 - 10 Foot MIDI Cable
