

Tuners

The finest professional tuning equipment

V-SAM hand-held tuner.

Virtual Strobe soft case accessory.

Model 320

Peterson offers a full line of professional grade audible and stroboscopic visual tuners that is widely respected throughout the music industry. The first tuner to carry the Peterson name was developed more than 50 years ago specifically for tuning organs.

Many original Model 150 and Model 200 audible tuners from the 1950s and 60s can be found in organ shops and some are still used regularly. Since 1974, the Model 320 Seven Octave Audible Tuner has been the choice of a great many pipe organ tuners. Its calibrated vernier control and 1/3 of one cent accuracy throughout the full seven octave range allow tuning to any pitch with precision.

The newest models are motorless, battery operated hand-held tuners utilizing our patented "Virtual Strobe Technology™". A Liquid Crystal Display and cutting-edge technology create an authentic, real-time stroboscopic visual effect that is smooth and accurate down to 0.1 cent of deviation. There has never been a more precise, easier to use motorless tuner available at any price.

Peterson's VS-II Virtual Strobe Tuner™ features a built-in microphone; manual and automatic note detection/selection; adjustable Concert A reference in 0.5 Hz increments; pitch offset adjustment in 1 cent or 0.1 cent increments; and an assortment of built-in historical tuning temperament standards as well as equal temperament and a proprietary temperament for tuning guitars. The historical temperaments include

Pythagorean, Just Major, Quarter-Comma Mean Tone, Kimberger, Werkmeister, Young, and Kellner.

The V-SAM™ (for *Virtual Strobe/Audio/Metronome*) model adds a feature-rich metronome; an audible ten octave tone generator; adjustability to all key, tonal root and temperament combinations; and memory for user-defined custom temperaments. Both handheld Virtual Strobe models weigh less than 1.2 pounds. Our embroidered soft case with a shoulder strap is a popular accessory with organbuilders.

Other tuners available include the AutoStrobe™ 490, 490-ST, and 590 single-wheel motorized strobe models, the StrobeStomp™ Virtual Strobe Pedal Tuner for guitarists, and the top-of-the-line SC-5000 II™ twelve wheel strobe tuner. For more information about Peterson tuners, please contact a customer service representative or visit our tuner-specific web sites, www.PetersonTuners.com and www.StrobeStomp.com.
